CAPPING STATIONS FOR HP CARTRIDGES

The best way to protect a cartridge when it is not in use is to cap it with a capping station.

The capping station not only protects the nozzles from being damaged, but also prevents the ink from creating a layer of dried ink on the nozzle plate. A build up of dried ink can be hard to remove and during cleaning there is a risk of scratching the nozzle plate.

Using a capping station prolong the lifetime of the cartridge and makes the handling easier.
